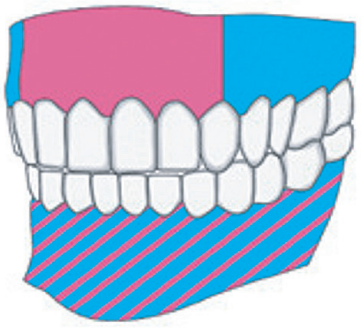
INFINITAS MINI IMPLANT

Selecting the correct Infinitas Mini Implant. The Infinitas System can be used to provide bone anchorage in virtually any maxillary/mandibular interproximal site and in the hard palate, although the most frequently utilised insertion site is buccal and mesial to the maxillary first molar. The insertion site is determined by individual anchorage demands and anatomical factors (e.g. bone quantity, root and sinus positions). The exact insertion site is selected by studying each patient's dental model and radiographs (OPT and/or periapical views) together. General guidelines for usage are:



DB10-0001/9 and DB10-0002/10 may be used in this area.

Not shown in diagram as used in Endentulous areas.

The insertion sites shown are intended for guidance only.
